Subject: microsoft settlement

A unanimous US Court of Appeals found that Microsoft had illegally used its monopoly position by preying on other software developers and computer manufacturers. Microsoft operated illegally, and any settlement that does not reflect this will just allow the company to continue this behavior. Unfortunately the proposed solution does not do this. In many ways it reinforces Microsofts monopoly, If they were found guilty of a crime (and they were) punish them and make sure they do not commit the same crimes in the future. This governments policy of allowing large corporations to do whatever they feel like with no worries about the law has got to stop. Thank you
